DETAILED ACTION
Election/Restrictions

Claim 1 is allowable. The restriction requirement between species, as set forth in the Office action mailed on 10/18/07, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim. Claims 11 and 12**, directed to second embodiment, are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim. However, **claims 17-20**, directed to a method of controlling a laser, are withdrawn from consideration because they do not require all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: the applicant's arguments filed on 7/14/08 made it clear that the best available prior art does not meet the limitations of claim 1 regarding how the controller is programmed to control the output of the laser, even though the claimed structure of the laser system is disclosed in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey Armstrong on September 9, 2008.

The application has been amended as follows:

Cancel claims 17-20.

Please, rejoin claims 11-12.

Please, amend claims 1 and 7 as follows:

1. A system comprising:

a multisection diode laser with a plurality of sections that are drivable by control inputs to select a desired output mode from among a plurality of available output modes;

a wavelength locker ~~looking~~ configured to lock the selected output mode to a target frequency, where the wavelength locker has a characteristic response period and there are at least two target frequencies in each response period of the wavelength locker; and

a controller operable configured to

(i) sweep the diode laser in a pre-determined frequency direction through a series of frequency points by asserting a pre-calibrated series of sets of control input values to the sections of the diode laser and

(ii) using use the wavelength locker to lock to each of the frequency points, wherein the controller is configured to obtain frequency points are obtained from cavity modes in a plurality of different supermodes,

and to pre-determine the sets of control input values ~~are pre-determined~~ to take account of thermal transients that are known to arise from jumps in the output modes that occur when sweeping through the pre-calibrated series of sets of control input values in the pre-determined frequency direction.

7. The system of claim 6, wherein the response period of the locker ~~matches the ITU grid~~ enables the laser output to be tuned to any one of a plurality of discrete frequency channels separated by a fixed channel spacing, and wherein there are at least 4 frequency points in each response period of the wavelength locker.
